

FEATURE 4 (INPUT) – CANTEEN FOOD ORDERING SYSTEM PROMPT

FEATURE 4 (INPUT)

Feature4 (INPUT)

Create a clean, accurate, professional 3D-style academic diagram set for a Canteen Food Ordering System based on these five features:

Customer Details Menu Items Order Details Order Status Order Cancellation

Create THREE separate sections: FLOWCHART, ALGORITHM, and ER DIAGRAM.

PART 1 – FLOWCHART

Create a proper standard flowchart using correct flowchart symbols:

START/END → Oval

PROCESS → Rectangle

DECISION → Diamond

INPUT/OUTPUT → Parallelogram

FLOW → Arrows

Follow these steps:

START

↓ Enter Customer Details

(Customer ID, Customer Name, Mobile Number, Email, Class/Department)

↓

Validate Customer Details

↓

Display Menu Items

(Item ID, Item Name, Category, Price, Availability)

↓

Select Available Menu Item

↓

Enter Order Details

(Order ID, Customer ID, Item ID, Quantity, Date/Time, Total Amount)

↓

Confirm Order

↓

Set Order Status = PENDING

↓

Check Order

↓

Update Order Status: PENDING → ACCEPTED → PREPARING → READY → COMPLETED

↓

Decision: Does Customer Want to Cancel?

YES → Enter Order ID and Customer ID → Enter Cancellation Reason → Record Cancellation Date/Time → Set Status = CANCELLED

NO → Continue Order Processing → Order Completed → END

Make the arrows clear and properly connected. Use no unnecessary steps.

PART 2 – ALGORITHM

Create a separate step-by-step algorithm with numbered steps.

Algorithm:

Start. Enter Customer ID, Customer Name, Mobile Number, Email, and Class/Department. Validate and store the customer details.

Present the algorithm in a clean numbered format with excellent spacing and readability.

PART 3 – ER DIAGRAM

Create a proper ER (Entity-Relationship) Diagram for the same Canteen Food Ordering System.

Use these entities:

CUSTOMER

Customer_ID (PK) Customer_Name Mobile Email Class/Department

MENU_ITEM

Item_ID (PK) Item_Name Category Price Availability

ORDER

Order_ID (PK) Customer_ID (FK) Item_ID (FK) Quantity Date/Time Total_Amount Order_Status

ORDER_CANCELLATION

Cancellation_ID (PK) Order_ID (FK) Customer_ID (FK) Reason Cancellation_Date/Time Status

Show the relationships clearly:

CUSTOMER 1 ■■■■ places ■■■■ M ORDER

MENU_ITEM 1 ■■■■ included in ■■■■ M ORDER

ORDER 1 ■■■■ may have ■■■■ 0..1 ORDER_CANCELLATION

Show PK and FK labels clearly. Use proper ER notation and relationship lines.

DESIGN REQUIREMENTS Make it suitable for a BCA college project. Use a clean white/light background. Use professional 3D-sty
